

# The FRAME Routine

## Key Topic Earth's Spheres

is about...

Spheres of earth and their properties.

<input type="radio"/> Main Idea atmosphere	<input type="radio"/> Main Idea biosphere	<input type="radio"/> Main Idea hydrosphere	<input type="radio"/> Main Idea geosphere	<input type="radio"/> Main Idea cryosphere
<b>Essential Details</b> Composed of oxygen and nitrogen	<b>Essential Details</b> Life on earth	<b>Essential Details</b> Contains water	<b>Essential Details</b> Solid earth	<b>Essential Details</b> Ice
Gasses in the atmosphere	organisms	Surface and ground water	Composed of oxygen, silicone. . .	Ice caps
Fossil fuels return gasses to the atmosphere from the biosphere	Atmosphere & Biosphere == Tornado killing organisms	Water by rain	Geosphere & atmosphere = volcano erupting	Volcanoes can effect the cryosphere
	Biosphere & geosphere = people running	Hydrosphere & cryosphere = glaciers melting		

**So What? (What's important to understand about this?)**

Different spheres interact with each other

Extension:  
Draw a diagram showing how a volcanic event can effect multiple different spheres.
