

THE SUFFIX SLIDE

If you have taught the Word Identification Strategy (DISSECT) to young students, then you already know that the most difficult thing for them to master is the verbal rehearsal of 56 prefixes and 54 suffixes. Try this activity to reinforce their recognition of the suffixes that cause them problems.

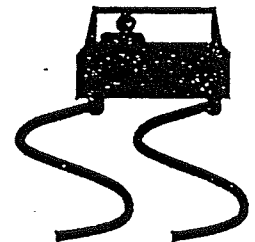

1. Give each student a copy of the SUFFIX SLIDE patterns.
2. Assign each student a suffix that they seem to have trouble remembering, or let them select their own.
3. On the suffix holder, the student should write or print their suffix.
4. In each box on the slide sheet, the student should write a word beginning of a word that ends with his assigned suffix.
5. Students may SEPARATE THE SUFFIX aloud on each word or may present their slide to the class, and they may ask other students to complete that step and to pronounce the word.
